PROFESSIONAL SUMMARY

Senior Java Backend Engineer with **8+ years** designing and operating distributed systems, microservices, and cloud-native APIs for healthcare, travel, and e-commerce platforms at scale. Deep expertise in **Java (8–21)** and the **Spring** ecosystem, with a track record of measurable impact — **85% lower sync latency**, **99.9% uptime**, and onboarding **14,000+ businesses**. **AWS Certified Developer – Associate**. Known for resilient, observable, well-tested systems and for working closely across product, design, and QA as an integrated member of cross-functional teams.

CORE SKILLS

Languages	Java 8–21, Python, SQL, Kotlin, TypeScript, PHP
Frameworks & APIs	Spring (Boot, MVC, WebFlux, Data JPA, Core IoC), gRPC, REST
Data & Messaging	MongoDB (Change Streams), PostgreSQL, MySQL, Cassandra, DynamoDB, Redis, Apache Kafka, AVRO
Cloud & DevOps	AWS (Lambda, ECS, S3, EBS, DynamoDB, DocumentDB), GitLab CI, Jenkins, TeamCity, Liquibase, New Relic, Grafana, Vault
Testing & Quality	JUnit, AssertJ, Hamcrest, Mockito, Powermock, JaCoCo, Karate, JMeter, SonarQube
Practices	Microservices, distributed systems, idempotency & retries, zero-downtime deployment, CI/CD, Agile/Scrum, PRD→TDD, code review, AI-augmented workflows (Claude/Copilot)

PROFESSIONAL EXPERIENCE

Senior Java Backend Engineer

Dec 2023 – Dec 2025

Publicis Groupe

Client: UnitedHealth Group (Optum) – Health Plan Administration Tool

- Led backend development for a Health Plan Administration Tool enabling dynamic rule configuration and seamless cross-system integration.
- Designed a real-time **MongoDB Change Stream** system with resume tokens and distributed locking, **reducing sync latency by 85%** while sustaining **99.9% uptime**.
- Built a functional document-processing pipeline that simplified rule mapping and **cut conditional complexity by 40%**, expanding edge-case test coverage.
- Enabled **zero-downtime deployment** of business-rule updates to support rapid regulatory changes.
- Developed APIs with Java 11/17/21, Spring MVC, and Spring Data JPA; implemented dependency injection via Spring Core IoC.
- Translated PRDs → technical designs → Jira epics/stories using AI-assisted multi-pass analysis, producing clearer acceptance criteria, dependencies, and risk notes.
- Wrote unit tests with JUnit, AssertJ, Hamcrest, and Powermock; authored TypeScript MongoDB migration scripts.

Senior Java Backend Engineer

Nov 2022 – Dec 2023

Encora (Nearsoft)

Client: OpenTable

- Developed REST APIs and automation scripts that **onboarded 14,000+ restaurants**, improving platform scalability and operational efficiency.
- Built APIs with Java 11/17 and Spring MVC/WebFlux; automated ETL processes in Python.
- Implemented Kafka messaging and Redis caching; worked across PostgreSQL, MongoDB, and MySQL.
- Monitored services with Grafana and optimized CI/CD pipelines in TeamCity; ensured quality with JaCoCo, JUnit, and Powermock.

Senior Java Cloud Engineer

May 2022 – Nov 2022

Zoolatech

Client: Nordstrom – US & Canada e-commerce platforms

- Refactored navigation algorithms and modernized CI/CD infrastructure across Nordstrom's storefronts.
- Upgraded services from **Java 8 to 11/17**, migrated pipelines from GoCD to GitLab CI, and transitioned environments from Amazon Linux 1 to AL2.
- Implemented features with AWS Lambda, EBS, S3, and ECS; integrated Kafka and Redis for messaging and caching.
- Monitored systems with New Relic; ensured quality with JaCoCo, JUnit, and Powermock.

Senior Java / Kotlin Engineer

Mar 2021 – May 2022

Luxoft

Client: Expedia Group

- Built **gRPC and REST services** for tax validation across Expedia platforms using Kotlin, Spring WebFlux, and Spring Boot.
- Managed data with MongoDB, Cassandra, and Redis; ensured consistency via Kafka.
- Created AVRO models and used Vault for secure secret management.
- Conducted E2E and performance testing with Karate and JMeter; maintained quality with JaCoCo, JUnit, and Powermock.

Senior Java Backend Engineer

Oct 2019 – Mar 2021

Softtek

Client: Intermountain Management LLC

- Led backend development for forecasting and COVID-19 tracking systems using Spring and AWS.
- Built Spring-based forecasting tools for revenue and budget KPIs with **optimized cold-start performance** on AWS Lambda.
- Developed a COVID-19 tracking system with QR scanning, face recognition, and thermal analysis for safe office return.
- Created REST APIs and batch processing with Java 8 and Python; managed data with MySQL, DynamoDB, and DocumentDB.
- Used Liquibase for database versioning and SonarQube for code quality; implemented CI/CD with Jenkins.

Software Solutions & Full-Stack Engineer

Jan 2017 – Oct 2019

Regional Research Center "Dr. Hideyo Noguchi"

Supported by the Kellogg's Foundation • Aligned with UN Sustainable Development Goals

- Designed and developed full-stack systems and mobile applications supporting agricultural trade and nonprofit initiatives — including dynamic pricing, inventory management, and offline order processing.
- Built backend systems with PHP (Yii) and front-end interfaces with HTML, CSS, and JavaScript.
- Developed REST APIs, batch CSV loaders, and dynamic reporting tools (Excel, PDF, Google Maps visualizations).
- Created an Android app with offline synchronization for purchase/order tracking.
- Led architectural design and conducted UAT with stakeholders; managed data with MySQL.

EDUCATION

Bachelor of Software Engineering (B.SE.)

Software Engineering

CERTIFICATION

AWS Certified Developer – Associate

Amazon Web Services • 2021
